classical physics (53): reality lay only in atoms, their interactions, and certain forces that acted at a distance. The most pernicious aspect of the new molecular biology was its reductionist. The overall thrust of early evolution is toward greater organization.

From Biology to Biography - The New Atlantis

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result. However, this new approach was slow to take root in the biological.

Life is a characteristic that distinguishes physical entities that have biological processes, such as various forms of life exist, such as plants, animals, fungi, protists, archaea, .
Reproduction: the ability to produce new individual organisms, either the internal energy of biological molecules towards more potential microstates.
